

Montgomery County Office of Homeland Security and Emergency Management

DUE TO UNCOOPERATIVE WEATHER MOSQUITO SPRAYING COULD BE EXTENDED

For Immediate Release – September 20, 2017

The Texas Department of State Health Services has indicated that approximately 75% of Montgomery County has been sprayed. If weather conditions permit, there will be two planes completing the spraying in Montgomery County tonight. If weather conditions are unfavorable, there may be a need to complete spraying tomorrow evening.

We will inform the public when spraying is complete. If you have sensitive receptors i.e.: bees, pets, and/or organic gardens, continue to monitor our website for updates.

Continue to monitor www.mctxoem.org, for any updates to this timeframe.
